DESIGN THINKING ASSIGNMENT

Interview, Observation, Problem Identification & Empathy Mapping

Student Name: Arman

1. INTERVIEW

The interview is conducted with a male student to understand his daily routine, needs, problems, preferences, and feelings related to candies and earbuds.

Interview Field	Details
Name	Ali
Age	20 years
Gender	Male
Occupation	Student

2. OBSERVATION

Observed User: Student

The student often uses earbuds while studying, travelling, or relaxing. He also eats candies during breaks and free time. The student prefers things that are convenient, portable, comfortable, and easy to use.

Observation Area	Observation
Daily Activity	Studies, travels, listens to music, and takes breaks.
Earbuds	Uses earbuds for music and entertainment; carries them with him.
Candies	Eats candies during breaks or when he wants a quick sweet snack.
Behavior	Looks for convenient and easy-to-carry products.

3. PROBLEM IDENTIFICATION — STUDENT

The student faces a few common problems: earbuds can be uncomfortable, lose battery, or get misplaced. He also wants candies that are tasty and convenient, while being aware that eating too many sweets is not a healthy habit.

Problem	Description
Earbuds	Low battery, discomfort, connectivity issues, or losing the earbuds.
Candies	Too much sweetness and the need for convenient, attractive packaging.
Student Lifestyle	Needs portable products that are easy to use during study and travel.

4. EMPATHY MAPPING

The empathy map describes what the student **THINKS, SAYS, DOES,** and **FEELS**.

THINKS	SAYS
• Wants good-quality earbuds. • Wants comfortable earbuds. • Thinks candies are enjoyable. • Wants products that are easy to carry. • Thinks about convenience and portability.	• “I like listening to music with earbuds.” • “I enjoy eating candies.” • “I want something easy to carry.” • “I prefer comfortable products.”
DOES	**FEELS**
• Uses earbuds while studying and travelling. • Listens to music in free time. • Carries earbuds in a pocket or bag. • Eats candies during breaks. • Buys candies for enjoyment.	• Feels relaxed while listening to music. • Feels happy when eating favorite candies. • Feels comfortable when earbuds fit well. • Feels satisfied with convenient products. • Feels annoyed when earbuds have problems.

5. EMOTIONS

Product	Positive Emotions	Negative / Concerned Emotions
Candies	Happy, excited, satisfied, relaxed	Concern about too much sugar
Earbuds	Relaxed, focused, entertained, comfortable	Annoyed if uncomfortable, lost, or out of battery

6. KEY INSIGHTS

• Students value convenience and portability.
• Earbuds help the student enjoy music and focus during activities.
• Candies provide quick enjoyment during breaks.
• Better comfort, easy use, and reliability can improve the user's experience.

7. CONCLUSION

The interview, observation, problem identification, and empathy map show that understanding a student's real needs and feelings is important for designing better products and experiences.
